

### Step 1: Body

- Bend the tabs on pieces 2, 3, 4, and 5
- Glue the body pieces together. Don't get glue on the tabs on pieces 2, 3, 4, and 5. Let dry.

Pieces are marked with these lines:

- Cut along line
- - - - - Fold along line

### Step 2: Wings

- Assemble the main wings by gluing 10 to 14 and 11 to 13. Let dry.
- Once they are dry, carefully bend wings & wing tips (9 and 12) to give them camber.
- Attach wing tips to wings by interleaving the tabs and gluing 9 to 10 and 11 to 12. Use the gauge to get the 25° angle. Let dry.
- Attach wings to each other by interleaving the tabs and gluing. Use the 5° gauge to get the right amount of dihedral angle. Let dry.

### Step 3: Final Assembly

- Attach 15 to body using tabs from 2 & 3. Let dry.
- Attach wings to body using tabs from 4 & 5. Let dry.

### Step 4: Reinforce wings

- Glue the 3 wing reinforcements (16) to the top, left, and right of the main wing/body joint.
